#### Run Large Language Models Locally

## Get up and running with large language models, locally.

Run <u>Llama 2</u>, <u>Code Llama</u>, and other models. Customize and create your own.

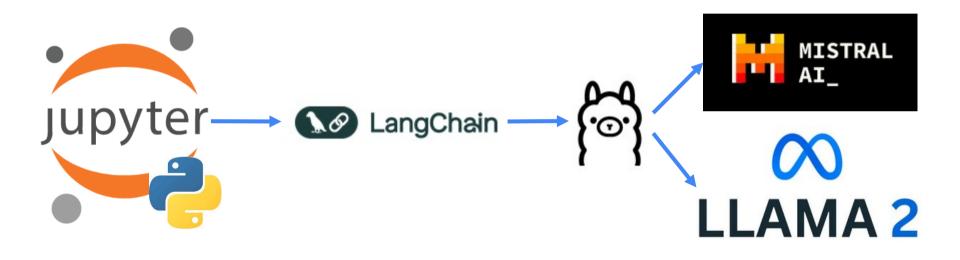

Windows (preview)

Models Filter by name... Featured gemma Gemma is a family of lightweight, state-of-the-art open models built by Google DeepMind. ± 209.1K Pulls 
♦ 69 Tags 
• Updated 13 days ago llama2 Llama 2 is a collection of foundation language models ranging from 7B to 70B parameters. mistral The 7B model released by Mistral AI, updated to version 0.2. 

#### Call Local LLM From Jupyter Notebook Using LangChain

#### Demo - The Problem with LLMs - 1

```
lang-chain-demo\sluug_2021 on master [?]
) ollama run gemma
>>> What was the presentation to the St. Louis UNIX Users
Group on February 10th, 2021 about?
```

Answer: I do not have access to real-time information, therefore I cannot answer the question regarding the presentation to the St. Louis UNIX Users Group on February 10th, 2021.

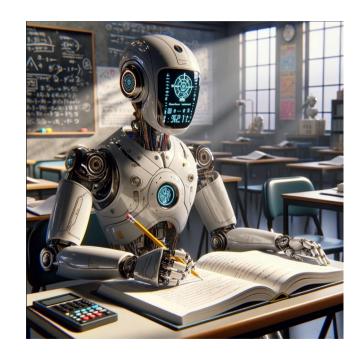

## The Problem with Large Language Models (LLMs) - 1

- Trained on a broad spectrum of data
- Does not include newer, proprietary, or domain-specific information.

#### Prompt Engineering / Augmented Generation

 Augmented Generation is like an open book test for the LLM.

 Is equivalent to copy/pasting text into the Chat GPT Input box before typing your question.

#### Call to Action - Volunteers Wanted

- LLMs are useful
- LLMs can benefit the LUG
- Volunteers Wanted
  - Turn this Proof of Concept into a Realized Workflow
  - MVP Create a Script to generate and email
    - Open Source!
    - Continue to Enhance
      - Stable Diffusion → YT Thumbnails
      - ...
- Mine DISCUSS for future presentation ideas

## Retrieval-Augmented Generation (RAG)

#### Demo - The Problem with LLMs - 2

```
11m.invoke(system_prompt + doc_str + "What was the BASE presentation to the St. Louis UNIX Users Group on February 18th, 2021?")

> 8.4s
```

' A Gentle Introduction To git - This presentation covered the basics of using Git as a version control system, including the working folder, the staging area, and the repository. It also provided an overview of common Git commands for initializing a repository, making and reverting commits, and branching and merging. The goal was to give attendees a solid foundation in using Git for version control.'

## The Problem with Large Language Models (LLMs) - 2

- Limited Context Window
  - Hard Limitation

## Retrieval-Augmented Generation (RAG)

- Break text into chunks
- Retrieve chunks relevant to the Question
- Send relevant chunks along with Prompt
- Relevant chunks "should" fit in Context
